

ActivID[®] Credential Management System

ACTIVID CREDENTIAL MANAGEMENT SYSTEM BENEFITS

- Increase security and reduce fraud with a single platform capable of issuing and managing HID Global devices and credentials
- Capability to address a broad range of organizational requirements out-of-the-box as part of the Classic Edition; advanced functionality available via the Advanced Edition
- Unique, patented post-issuance update capabilities that allow organizations to extend the lifetime of authentication devices, offering substantial cost-savings and productivity enhancements
- Proven technology that numerous security-minded organizations have leveraged to issue hundreds of millions of credentials
- Compliance with stringent U.S. Federal government Personal Identity Verification (PIV) standards
- Easy integration with a wide variety of operating systems, directories, front or backend identity management and provisioning systems, certificate authorities, and physical access control systems

PROVEN CREDENTIAL MANAGEMENT SYSTEM TO SECURELY DEPLOY SMART CARDS AND USB TOKENS

HID Global's ActivID[®] Credential Management System (CMS) provides organizations comprehensive, highly configurable solutions to meet their unique needs. With HID Global, organizations can establish trust in the identity of users to securely manage access to all their networks, PCs, in-house, public and private cloud applications, building facilities, and other resources.

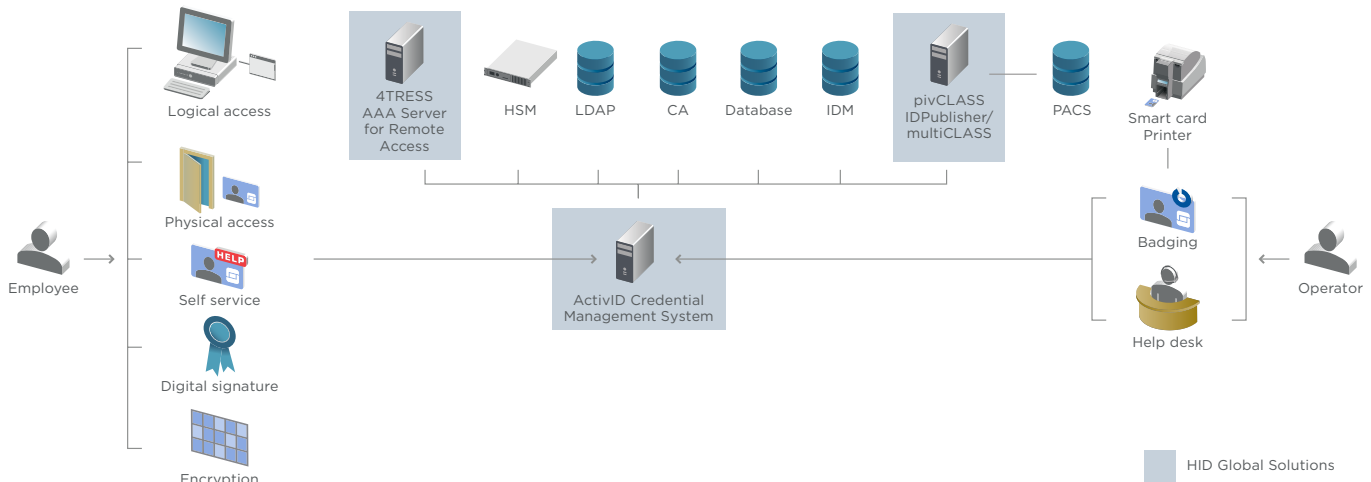

Organizations evolving towards industry standard (X.509) digital, certificate-based smart cards or smart USB tokens can trust the HID Global portfolio to support their changing requirements. HID Global delivers the technology expertise organizations need, from the reader, smart cards and card printers to the authentication software and PACS integration to conveniently and cost-effectively deploy a complete smart ID card solution.

The ActivID CMS enables organizations to easily replace traditional user names and passwords with digital identities. Organizations can quickly and securely issue and manage smart cards and smart USB tokens containing a variety of credentials, including public key infrastructure (PKI) certificates, one-time passwords (OTPs), biometrics and demographic data. Organizations can also securely manage a large number of end users, in heterogeneous, dispersed locations, and update their credentials at any point in their life cycle.

The ActivID CMS includes the following features and capabilities:

- Customizable workflows and policies that readily adapt to a variety of environments and deployment scenarios
- Tamper-evident audit features that log all event activities for reporting
- Extensibility to support batch and service bureau issuance models
- Unique, patented post-issuance update capabilities
- Web-based self service
- Web-based help desk administration
- Extensible plug-in capability, which allows organizations to extend and customize the product feature set
- Integration with physical access control systems to seamlessly manage credentials for physical and logical access

ActivID Credential Management System: How It Works

The ActivID CMS consists of HID Global's ActivID® Credential Management System (CMS), as well as an add-on module -- HID Global's ActivID® Batch Management System (BMS), which is bundled into the Advanced Edition of ActivID CMS.

ActivID CMS

ActivID CMS provides a comprehensive, flexible and highly configurable solution to manage the issuance and administration requirements of successful smart chip deployments. With ActivID CMS, organizations can manage their authentication devices, data, applets and digital credentials (including PKI certificates) through their entire life cycle. They can also update user access in real-time, without additional costs or resources.

Together with the ActivID ActivClient® security client software, ActivID strong authentication platform, and ActivID authentication device offerings, the HID Global portfolio offers a complete credential lifecycle management solution.

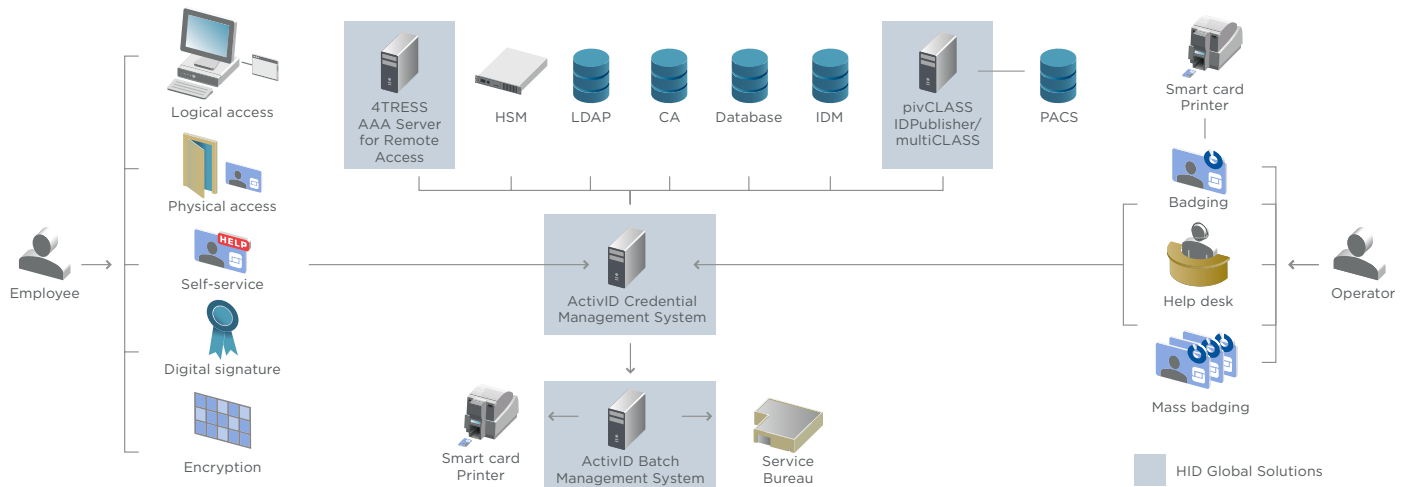

Combined with HID Global Crescendo® smart cards, OMNIKEY® smart card readers, FARGO® card printers, Asure ID® card personalization software and pivCLASS® software solution for PACS in PIV environments, HID is the only vendor offering a complete solution to create, manage and use PKI smart cards for both logical and physical access.

The ActivID CMS also includes a software development kit for systems integrators and independent software vendors.

When ActivID CMS is deployed with ActivClient security software, organizations can use smart cards for both strong authentication to the corporate network and physical access to corporate facilities. For example, organizations can use HID Global's Crescendo® smart cards, which are a series of highly secure multi-technology, off-the-shelf smart cards built to provide out-of-the-box, standards-compliant support for existing access control and strong authentication applications.

Additionally, United States Government agencies and contractors can leverage ActivID CMS to issue and managed Personal Identity Verification (PIV) cards and PIV-Interoperable (PIV-I) cards in compliance with FIPS-201. ActivID CMS makes it easy for enterprise customers to issue Commercial Identity Verification (CIV) compliant smart cards that follow the same standard but for the commercial market. Once issued, CIV cards are compatible with a large number of systems and applications compatible with the PIV standard.

ActivID Credential Management System Advanced Edition: How It Works

HID Global's ActivID BMS

ActivID BMS extends the functionality of the ActivID CMS to enable organizations to communicate securely with service bureaus for personalization and encoding of their employee smart cards.

ActivID BMS provides a lower cost, standard-based solution for batch requests and also offers the flexibility of a local issuance model by allowing card issuers to produce cards using their own printers.

ActivID BMS creates and manages batches of smart card requests and exchanges information with the service bureau that executes those requests and produces the cards. At the same time, the ActivID BMS communicates with the ActivID CMS to enable secure post-issuance activation and life cycle management of the smart cards after production is completed.

Why HID Global's Identity Assurance Solutions?

HID Global has a proven history of helping enterprise, government and financial service organizations meet their information security and compliance requirements. That's why more than 2,500 of the most security conscious customers around the globe trust HID Global for their secure identity needs. HID Global is committed to continually enhancing customer value through Identity Assurance solutions that drive down costs, are easy to use and increase end user and administrative convenience.

ACTIVID CREDENTIAL MANAGEMENT SYSTEM THIRD-PARTY INTEROPERABILITY

ActivID Credential Management System is interoperable with many third-party systems including those from:

- Entrust
- IBM®
- Lenel®
- Microsoft®
- NetIQ®
- OpenTrust™
- Oracle®
- Safenet®
- Symantec®
- Thales®
- Red Hat®
- Verizon® Business

	ActivID Credential Management System	ActivID Batch Management System
Server Platform Support	Operating Systems: Microsoft® Windows® Server 2008 / 2008 R2 / 2012 / 2012 R2, Microsoft Windows Server 2012 / 2012 R2, Solaris 10 SPARC and 10 x86	Operating Systems: Microsoft Windows Server 2012 / 2012 R2
	Databases: Microsoft SQL Server 2008 / 2008 R2 / 2012 / 2014, Oracle® 11g / 12c (for CMS Windows), Microsoft® SQL Server 2005 SP2, 2008 R2, 2012 SP1, 2014 (for CMS Windows)	Databases: Oracle® 11g R2 and 12c
Client Platform Support	Operating Systems: Windows 7 / 8.1 Update / 10, Windows Server 2008 / 2008 R2 / 2012 / 2012 R2, Windows Server 2012 / 2012 R2 Update (32- and 64-bit)	Operating Systems: Windows 7 and 8.1 Update 1
	Browsers: Internet Explorer 9 / 10 / 11, Firefox 31 and 38 (ESR)	Browsers: Internet Explorer 6.0 and higher
Main Feature Set	Administrative Services: Issuance, card life cycle management, PIN management, certificate management, AAA management, user management, configuration	Administrative Services: Allocation of batch orders, information exchange with ActivID Credential Management System, generation and encryption of data exchange with service bureau, synchronization of smart card status, local batch issuance
	Card Holder Services: Issuance, card life cycle management, PIN management, AAA management, authentication, post-issuance	
Supported Devices	Java Cards: ActivKey® Display, ActivKey SIM, and Smart Cards; smart cards from vendors such as Atmel®, Gemalto™, Giesecke & Devrient, HID Global and Oberthur Technologies; PKCS#11 devices that comply with ActivID Credential Management System requirements	
	Smart Card Readers: Readers supported by ActivClient, PC / SC readers provided in the supported printers	
	Biometric Service Providers: Precise Biometrics and Secugen	
	Datacard® printers (using Datacard ID Works 6.x) and FARGO® printers (using Asure ID 7.6 Developers Edition)	Smart Card Printers: Datacard printers (using Datacard ID Works 6.x) and FARGO printers (using HID Asure® ID 7.6)
	Digital Cameras: Logitech® ClickSmart 420, Logitech ClickSmart 820, cameras supported by EPI Builder 6.3, TWAIN-compliant cameras	
Hardware Security Modules: AEP KeyPer® Enterprise / Plus, Safenet Luna® SA / PCI-E, Thales nShield™ Connect / Solo	Hardware Security Modules: Safenet Luna SA and Luna PCI-E, Thales nShield Connect and nShield Solo	
Compliance and Standards	U.S. Government: FIPS 201 certified (FIPS 201-2 certification in progress), Smart Card Interoperability Specifications GSC-IS v2.0, GSA Basic Services Interface (BSI), GSC-IS v2.1, Section 508-compliant, U.S. Department of Defense Pre-Issuance Requirements v4.2.1, FIPS 140-2 certified cards and applications support, FIPS 201 / PIV-certified cards and applications support, FIPS 140-2 certified HSM support	
	Data Access: LDAP v3, JDBC	
	General: Secure Sockets Layer (SSL), GlobalPlatform / OpenPlatform, Java Card™ 2.1 and 2.2	
Third-party Interoperability	Directories: Atos DirX® Directory, Critical Path™ Directory Server, IBM® Tivoli® Directory Server, Microsoft Active Directory, Microsoft Active Directory Lightweight Directory Services, NetIQ eDirectory, Oracle Directory Server, Red Hat Directory Server	
	Certificate Authorities: Entrust® Authority Security Manager™, Keynectis, Microsoft Windows Certificate Authority, OpenTrust, Symantec® Managed PKI, Verizon® UniCERT® (with ARM and with UPI)	
	Service Bureaus: Oberthur Card Systems; any services bureau supporting the U.S. Department of Defense Pre-Issuance Requirements v4.2.1	
Compatibility with Other Software Products	ActivID ActivClient, ActivID AAA Server for Remote Access, ActivID Authentication Server, ActivID Appliance, pivCLASS IDPublisher, pivCLASS MultiCLASS
